20 views, 4 tasks
Learner partition
reference pool 20 %
candidate pool
fixed test set
Ability vector
d most practised KCs,
smoothed success rate
(defined on reference)
Draw n learners
n = 50, 100, 200, 500
from the candidate pool,
repeated R times
Fit on training only
support filter, z-score,
covariance estimate,
learned metric
Retrieve neighbours
k nearest training
learners for every
test learner
Predict and score
mean outcome of the
neighbours; R^2 and
neighbour precision
Diagnose
n/d, shrinkage weight,
effective rank, hubness,
signal–variance alignment
